

RAELYN PLEDGER

Richmond, CA • ladyraelynrose@gmail.com

OBJECTIVE

Hands-on technician seeking an assembly, test, or repair role. I diagnose and fix engines, printers, computers, and locks, keep a fleet of Linux machines running, and document what I fix.

MECHANICAL & FABRICATION

- **Automotive:** engine, fuel, electrical, and brake work on everything from a 1971 Honda N600 to modern cars; carburetor rebuilds, starters and fuel delivery, brake pads and full system flushes, diagnosis from symptom to cause
- **3D printing:** printers from multiple manufacturers (Bambu Lab, Prusa, Creality, Artillery), materials (PLA, PETG, TPU, ABS, and more), and slicers (OrcaSlicer, Bambu Studio, PrusaSlicer, Cura); orientation, supports, and profiles for functional parts; printers managed remotely over LAN through automated scripts
- **CAD:** Onshape — parts modeled from measured hardware (replacement feet, adapters, enclosures), exported to STL/STEP
- **Electronics:** soldering and through-hole PCB assembly; regularly teaches soldering to others at a community workshop
- **Locksmithing:** installation, repair, and rekeying from specifications; precision hand-tool work
- **Method:** component-level diagnosis — find the cause, fix it, verify it, write it down

REPAIR & HARDWARE

- **Repair and reuse of e-waste:** desktops, laptops (RAM, storage, keyboard connectors, firmware flashing), a 3D printer, a VR headset, and a home server put back into service
- **Community repair:** Fix-it Clinic repair coach with Sudoroom (Oakland hackerspace); e-waste education panelist, De Anza High School, Richmond (Jan 2026)

SYSTEMS

- **Linux administration** (Fedora, NixOS, Raspberry Pi): systemd services, LUKS, Samba, SSH; Tailscale mesh across a multi-machine fleet; bash and Python scripting
- **Storage:** RAID configuration, expansion, and rebuild after drive failure; ZFS; a dropping drive traced to its own controller board by isolating cable and power
- **AI-assisted fleet administration:** runs the fleet through a self-hosted AI agent on Linux — scheduled tasks, monitoring and alerts, 3D-printer control, and repair automation, with the agent's tooling built and maintained in bash and Python
- **AI:** trains small language models from scratch on consumer GPU hardware; published Throughline, a GPL-3.0 persistent-memory framework for LLM agents

WORK EXPERIENCE

Basic Needs Program Assistant — Contra Costa College, Richmond, CA May 2025 – June 2026

- Ran day-to-day operations of a campus food pantry serving hundreds of students per week: distribution, inventory, and grocery-recovery logistics under time and resource constraints

LGBT Events Organizer — Contra Costa College, Richmond, CA 2026

- Planned and ran campus events including the Pride picnic and Rainbow Comets Club programming

Locksmith Technician — Velocity Lock and Key (family business) 2015 – 2019

- Lock installation, repair, and rekeying from technical specifications and customer descriptions; residential and commercial

Customer Service — Mau House Cat Hotel, Richmond, CA

- Client-facing role: clear communication, reliability, and calm handling of unexpected situations

EDUCATION

Automotive Technology — Contra Costa College, Richmond, CA 4+ years

- Nearly two dozen automotive classes over four-plus years; fully trained as a mechanic — engine repair, brakes, diagnosis

Diablo Valley College — Pleasant Hill, CA

- CIS 171: Linux Systems Administration (completed Spring 2026); German Language Program; National Community College German Honors Society inductee
